VANTEON®

SERVICES

Mobile Application Testing

The smartphone has revolutionized the way that businesses and individuals get things done. Vanteon has been active since the earliest stages of iOS™ and Android™ application development, testing product integrations that make a difference in everyday life.

Vanteon provides mobile app testing for the new wave of device control and appliance interface, as well as more traditional custom apps. Our Quality Assurance team has provided testing as an extension of our in-house development, as well as independent verification to support our clients' development groups.

Mobile Application Testing Expertise:

- **Device Control**: From kiosks, to household electronic control, to military use, Vanteon has been involved in all phases of mobile application test and design.

- **Education:** Vanteon has tested cutting-edge applications over smartphones and tablets for pre-K through college level, that are currently being utilized throughout school districts in the United States.

- **Accessibility:** With the advent of DOE inclusion standards for disability, Vanteon has met the needs of educational providers by testing mobile devices to ensure that every student has equal access to education.

"Both products that Vanteon engineered for my applications met all expectations and have proven to be very reliable products that are used in harsh environments."

Scott Patchin, VP Engineering, Mission Mobility

Quality From Design Through Production
